GUIDELINES FOR PUBLICATION

To be acceptable for publication, a manuscript must:

- Be of value and interest to civil engineers.
- Be an original review of past practice, present information, or probe new fields of civil engineering activity.
- Contribute to the planning, analysis, design, construction, management, or maintenance of civil engineering works.
- Contribute to the advancement of the profession by using the journals as a forum for the exchange of experiences by engineers.
- Include a practical applications section whenever possible; theoretical manuscripts should indicate areas of additional research to implement technology transfer.
- Be free of evident commercialism or private interest, but must not obscure proper names when they are required for an understanding of the subject matter.
- Be free of personalities, either complimentary or derogatory.
- Not be readily available elsewhere—it should not have been published previously by EACE (including a proceeding) or other professional or technical societies, federal agencies, or commercial publishers.
- Be clear and transparent on authorship; EACE will not review or publish any manuscripts whose authorship is in dispute.
- Be consistent with the purpose of the Society and not contain purely speculative matter, although it can use scientific evidence to challenge current concepts or propose new ideas that will encourage progress and discussion.

TYPES OF JOURNAL CONTENT

The journal publishes the following types of manuscripts:

***Technical Papers* —** Technical papers are full-length manuscripts of value and interest to civil engineers. They must be original reviews of past practice, present information of current interest, or probe new fields of civil engineering activity. They should report results of thought-provoking studies that contribute to the planning, analysis, design, construction, management, or maintenance of civil engineering works. Technical papers should include a practical applications section whenever possible; theoretical manuscripts should indicate areas of additional research to implement technology transfer. Practical papers are strongly encouraged. Technical papers must have fewer than 10,000 words or word- equivalents.

***Technical Notes* —** Technical notes present (1) original, practical information; (2) preliminary or partial results of research; (3) concisely presented research results; and (4) innovative techniques to accomplish design objectives. Technical notes should be no more than 3,500 words or word-equivalents.

***Case Studies* —** Case studies describe a method or application that illustrates a new or existing principle or presents an innovative way to solve a problem. Ideally, results should have broad implications and not be specific to only the case presented. Case studies are judged with the same rigor as technical papers and notes. They may range from 5,000–10,000 words or word-equivalents.

Review Articles **-** The review articles are described the current state of the knowledge and provide suggestions for potential future research direction in the field. The length of a published review article is from 3000-10000 words (not including abstract, tables, figures, and references) with 100 or more references.

Editorials — An editorial is a brief opinion piece, normally written by the editor, concerning the scope, content, direction, or philosophy of the journal or a policy issue concerning engineering research or its application. Editorials are occasionally invited but not reviewed. Contributions are usually short, not exceeding one or two printed pages or 1,000–2,000 words, and rarely contain tables, figures, or references. Editorials require a title and author's byline with current affiliations.

ETHICAL STANDARDS

OBLIGATION OF AUTHORS

- An author's central obligation is to present a concise account of his or her research, work, or project completed with an objective discussion of its significance.
- Submitted manuscripts should contain detail and reference to public sources of information to allow the author's peers to repeat the work or otherwise verify the accuracy. All reasonable requests by editors or reviewers for materials, data, and associated protocols should be fulfilled. Authors should clearly note any data sharing restrictions in their cover letter when submitting (see EACE Policy on Materials and Data Sharing).
- The manuscript must not contain plagiarized material or falsified research data.
- Fragmentation of research papers should be avoided. An engineer or scientist who has done work on a several related systems should organize publication so that each manuscript gives a complete account of a particular aspect of the general study.
- EACE will not review or publish manuscripts that have been previously published in print or online.
- Authors should refrain from criticizing another manuscript by personally attacking the author.
- To protect the integrity of authorship, only persons who have significantly contributed to the research or project and manuscript preparation should be listed as coauthors. The corresponding author will attest to the fact that any others named as coauthors have seen the final version of the paper and agreed to the submission for publication.
- It is inappropriate to submit manuscripts with an obvious commercial intent.
- It is inappropriate for an author to either write or coauthor a discussion on his or her own published manuscript, except in the case of a closure to the discussion.

OBLIGATION OF EDITORS

- The primary responsibility of EACE journal editor is to ensure an efficient and fair review process of manuscripts submitted for publication, and to establish and maintain high standards of technical and professional quality.
- Criteria of quality are originality of approach, concept, and/or application; profundity; and relevance to the civil engineering profession.
- An editor shall give unbiased consideration to all manuscripts offered for publication and shall judge each on its merits without regard to any personal relationship or familiarity with the author(s), or to the race, gender, sexual orientation, religious belief, ethnic origin, citizenship, professional association, or political philosophy of the author(s).
- The editor and editorial staff shall disclose no information about a manuscript under consideration to anyone other than those from whom professional advice regarding the publication of the manuscript is sought. The names of reviewers shall not be released by the editors or editorial staff.
- An editor who authors or coauthors a manuscript submitted for consideration to the journal with which that editor is affiliated, shall not review that work. If after publication, the editor- author's work merits ongoing scientific debate within the journal, the editor-author shall accept no editorial responsibility in connection therewith.
- An editor shall avoid conflicts of interest and/or the appearance thereof. An editor shall not send a manuscript to reviewers who are known to have personal bias in favor of or against the author or the subject matter of that manuscript.
- Unpublished information, arguments, or interpretations contained in a submitted manuscript are confidential and shall not be used in the research of an editor or associate editor, or otherwise disseminated except with the consent of the author and with appropriate attribution.
- If an editor is presented with convincing evidence that the substance, conclusions, references or other material included in a manuscript published in EACE journal are erroneous, the editor, after notifying the author(s) and allowing them to respond in writing, shall facilitate immediate publication of an errata. If possible, an editor shall also facilitate publication of appropriate comments and/or papers identifying those errors.
- If an editor is presented with convincing evidence that a manuscript or published paper contains plagiarized material or falsified research data, the editor shall forward such evidence to the managing editor for investigation.

OBLIGATIONS OF REVIEWERS

- Because qualified manuscript review is essential to the publication process, all engineers and scientists have an obligation to do their fair share of reviews.
- If a reviewer feels inadequately qualified or lacks the time to fairly judge the work reported, the reviewer shall decline the invitation to review in a timely manner.
- A reviewer shall objectively judge the quality of a manuscript on its own merit and shall respect the intellectual independence of the author(s). Personal criticism is never appropriate.
- A reviewer shall avoid conflicts of interest and/or the appearance thereof. If a manuscript submitted for review presents a potential conflict of interest or the reviewer has a personal

bias, the reviewer shall return the manuscript promptly without review, and so advise the editor.

- If a reviewer receives for review a manuscript authored or coauthored by a person with whom the reviewer has a personal or professional relationship, the existence of this relationship shall be promptly brought to the attention of the editor.
- A reviewer shall treat a manuscript received for review as a confidential document and shall neither disclose nor discuss it with others except, as necessary, to persons from whom specific advice may be sought; in that event, the identities of those consulted shall be disclosed to the editor.
- Reviewers shall explain and support judgments adequately so that the editor and author(s) may understand the basis for their comments. Any statement that an observation, derivation, or argument has been previously reported shall be accompanied by the relevant citation.
- A reviewer shall call to the editor's attention any substantial similarity between the manuscript under consideration and any published paper or any manuscript submitted concurrently to another journal.
- A reviewer shall not use or disclose unpublished information, arguments, or interpretations contained in a manuscript under consideration, except with the consent of the author and with appropriate attribution.
- If a reviewer has convincing evidence that a manuscript contains plagiarized material or falsified research data, the reviewer shall notify the editor immediately. The reviewer should not contact the author directly.

AUTHORSHIP

To protect the integrity of authorship, only persons who have significantly contributed to the research or project and paper preparation shall be listed as coauthors. The corresponding author attests to the fact that any others named as coauthors have seen the final version of the paper and have agreed to its submission for publication. An author who submits a manuscript for publication accepts responsibility for having properly included all, and only, qualified coauthors. EACE will not consider papers if the authorship is in dispute.

EACE does not allow changes to the author byline, to include the order of the authors, after the paper has been accepted. During review, any changes must be verified by every author on the paper. Authors cannot be removed without their explicit permission.

Acknowledgments at the end of the paper are encouraged as a way to thank those who have contributed to the research or project but did not merit being listed as an author. The Acknowledgments should indicate what each person did to contribute to the project

ACCUSATIONS OF SCIENTIFIC MISCONDUCT OR VIOLATIONS OF EACE POLICIES

This section provides insight into the process that EACE staff and editors employ when issues arise or accusations are sent.

Manuscripts submitted to EACE are considered confidential and will not be shared. If a paper is under investigation for possible misconduct, EACE may share the manuscript with editors of other journals also investigating the matter.

DUAL SUBMISSION

Definition — EACE will not review papers that are being reviewed elsewhere. EACE performs a duplicate submission check that looks for similar papers. If EACE discovers that a paper in review is also in review elsewhere, EACE will contact the other journal and request a copy of the manuscript for evaluation.

Action —If a paper in review appears to be in review at another journal, EACE will ask the author for an explanation and, barring an honest mistake, likely reject the paper in review.

DUAL PUBLICATION

Definition — EACE does not review or publish material that has been published already. This includes publication in other journals, books, and proceedings. EACE expects that all submissions are novel and original to the author.

Action — The papers in question will be evaluated for similarity. The authors will be asked for an explanation. The publisher of the similar paper will be contacted. If the investigation by EACE finds that the paper meets the definition of dual publication, the paper may be retracted and the author's institution notified of the action.

REDUNDANT PUBLICATION OR FRAGMENTATION OF RESEARCH

Definition — EACE expects that submitted papers contain at least 50% new content and that the remaining 50% not be verbatim to previously published work. Authors are encouraged to build on previous work and submit new papers, so long as the submitted paper offers significant information. Conference papers included in an EACE or non-EACE proceedings are held to the same standard.

Action — Fragmentation of research is not acceptable. Papers in review that are found to contain excessive overlap to other papers either published or in review will be evaluated. Authors will be asked to provide an explanation on the differences between the papers in question. If an editor feels as though the submitted manuscript is redundant to already published materials, the paper will be rejected. Published papers that are found to contain excessive overlap are subject to a Notification of Redundant Publication. If the published overlap finds EACE in violation of another publisher's copyright, EACE may retract the paper. The author(s)' institution may be notified.

FABRICATION AND FALSIFICATION OF DATA

Definition — Fabrication of data is "making up data or results and recording or reporting them" and falsification is "manipulating research materials, equipment, or processes, or changing or omitting data or results such that the research is not accurately represented in the research record" (ori.hhs.gov/definition-misconduct).

Action — Fabricating or falsifying data is a major violation of proper scientific conduct. Authors accused of either violation will be asked to supply all supporting data and results for evaluation. If EACE and its editors find cause for further investigation, the issue may be referred to the author(s)' institution and/or funding agency for investigation. If wrongdoing is determined, the offending paper(s) will be rejected or retracted and the authors may be banned from publishing with EACE in the future.

PLAGIARISM

***Definition* —** "Plagiarism is the appropriation of another person's ideas, processes, results, or words without giving appropriate credit" (ori.hhs.gov/definition-misconduct).

***Action* —** EACE uses anti-plagiarism software to compare submitted papers to already published works. Authors may be asked to explain similarities. Follow-up investigation and action depends on the nature of the offense. If a paper is found to have deliberately plagiarized works of another, the paper will be rejected or retracted and the author(s)' institution will be notified.

CORRECTING THE LITERATURE

EACE has a responsibility to the engineering profession and the scientific community to ensure that known errors or misrepresentations are corrected in the literature.

Minor errors of fact or omission may be corrected by publishing an erratum. An erratum must be approved by the managing editor and will be reserved for errors that will impede the readers' understanding of the text. Minor typographical errors are typically not worthy of an erratum. Once approved, the erratum will be published online and in the next available print issue. The erratum and the original article will be linked in the EACE Library under the "Editorially Related" section or tab.

Major errors may result in the retraction of a paper. A retraction essentially tells the readers to disregard the original work. That said, retracted papers are still available to readers. The title of the original paper will be appended with the word "Retracted." The PDF will also be watermarked with the word "retracted." An explanation will be published and digitally linked to the paper. EACE strives to be precise in explaining why a paper has been retracted. Retractions that lack specificity will not be permitted. EACE will always consult with an author prior to retracting a paper, but in cases where wrongdoing has been confirmed or EACE faces potential legal repercussions, a retraction may be published without the author(s)' consent.

All corrections published are included in feeds to all abstracting and indexing services allowing for quick updates. All corrections are published online and in print and are available for readers for free (no subscription or registration required).

ALERTING EACE OF POSSIBLE MISCONDUCT

EACE will keep confidential the names and affiliations of individuals who report possible misconduct related to the authors, editors, and reviewers associated with EACE journals. Individuals wishing to make a report should contact the EACE managing editor at eaceresearch@gmail.com Accusations must be specific in order to allow for ample investigation.

MANUSCRIPT SUBMISSION AND REVISION REQUIREMENTS

Manuscripts should be submitted in soft and/or hard copies to the Managing Editor, eaceresearch@gmail.com, P.O. Box 20930 Code 1000, Addis Ababa, Ethiopia.

When submitting a manuscript for an initial review, please ensure the following are completed before approving your PDF copy:

- The manuscript title, author byline, and abstract are on the first page of your manuscript text.
- All authors have separate affiliation statements. The corresponding author should be noted. An e-mail address is required for the corresponding author and encouraged for all authors.
- The manuscript is in a double-spaced, single-column format with continuous line numbering.
- All figures and tables are included.
- Initial submissions may be in Microsoft Word, or PDF.
- All required submission questions must be answered.

When submitting a ***revised manuscript***, ensure that the following requirements are met:

- All requirements listed above for new submissions apply to revised manuscripts.
- Manuscript file is in Microsoft Word
- Figures are uploaded as separate files and in PDF, .tif, or .eps format.
- Tables are in Microsoft Word .
- All permissions are uploaded with the manuscript files.

PREPARING THE MANUSCRIPT

Title of Paper: The title of the paper should be phrased to include only key words and must have a length of not exceeding *80* characters including spaces.

Format of Manuscript: The manuscript should be double-spaced in *A-4* sized paper typed in a word processor compatible *with MS* Word. Margins of *25 mm* should be used on all sides of the paper

LENGTH

The length of the article should not exceed word equivalent of 6000 words, or *20* pages, double spaced using font size *12* typed in Times New Roman..

GENERAL FLOW OF THE PAPER

Sections of the article should not be numbered and use word headings only. Article sections should appear in the following order:

- Title page (includes title, author byline & affiliation)
- Abstract
- Keywords
- Introduction
- Materials and Methods
- Results and Discussion
- Conclusion
- Acknowledgments
- References
- Appendices

TITLE

Titles should be no longer than 80 characters including spaces. Authors should take care to ensure that the title is specific and accurately reflects the final, post–peer reviewed version of the paper. Authors should try to include relevant search terms in the title of the paper to maximize discoverability online.

AUTHOR BYLINES

Under the title of the manuscript, the full name of each author and his or her affiliation must be included. Former affiliations are permissible only if an author's affiliation has changed after a manuscript has been submitted for publication. If a coauthor has passed away, include the date of death in the affiliation line. Any manuscript submitted without a separate affiliation statement for each author will be returned to the corresponding author for correction.

Change in Author Byline

Authors are not permitted to change the byline of their paper once the manuscript has been accepted for publication by EACE. Changing the author byline during review is possible, but is subject to the following requirements:

- If the author order is changing from the initial submission, the corresponding author must provide evidence of approval by ***all*** the authors.
- If an author is being added after the initial submission, the corresponding author must provide an explanation of the addition as well as approval by ***all*** the initial authors ***and*** approval by the author being added.
- If any authors are being deleted who were included in the initial submission, the corresponding author must provide written permission from the author(s) being deleted. Without explicit permission to remove them, those names will remain in the byline.

Change in Corresponding Author

If the corresponding author is changing from the initial submission, the appropriate information must be updated in Editorial Manager, and the new corresponding author may need to register an account in the system if one does not already exist.

ABSTRACT

The abstract should be a single paragraph (maximum 250 words long) written in plain language and include a summary of the key conclusions of the manuscript. It should clearly state the purpose of the work, the scope of the effort, the procedures used to execute the work, and major findings. The abstract is the second most important online search discovery element, after the title. Authors should review the abstract to ensure that it accurately reflects the revised paper. Mathematics and references are not permitted in the abstract and will be removed by the copyeditors.

KEYWORDS

The keywords should be included right after the abstract. Three to six keywords in alphabetical order should be provided for the purposes of indexing.

INTRODUCTION

The Introduction should provide a clear background, a clear problem statement, the relevant literature on the subject and the objectives of the work. It should be understandable to colleagues from a broad range of scientific disciplines.

MATERIALS AND METHODS

This section should provide sufficient detail to allow the work to be replicated. Methods already published should be indicated by a reference and only relevant modifications should be described.

RESULTS AND DISCUSSION

Presentation of results should be clear and concise. The significance of the findings of the study should be discussed in detail. Extensive citations and discussion of already published material should be avoided.

CONCLUSIONS

At the end of the manuscript text, authors must include a set of conclusions, or summary and conclusion, in which the significant implications of the information presented in the body of the text are reviewed. Authors are encouraged to explicitly state in the conclusions how the work presented contributes to the overall body of knowledge for the profession.

Gender-specific words

Authors should avoid “he,” “she,” “his,” “her,” and “hers.” Alternatively, words such as “author,” “discusser,” “engineer,” and “researcher” should be used.

First-person usage

The use of first-person pronouns (I, we, my, our) should be avoided in technical material. The use of “the authors” or “this researcher” is preferred to first-person pronouns.

Equations

All displayed equations should be numbered sequentially throughout the entire manuscript, including Appendixes. Equations should be in the body of a manuscript; complex equations in tables and figures are to be avoided, and numbered equations are never permitted in figures and tables.

Units

It is strongly recommended that the author (s) should use the International System of Units (SI) units. If other quantities are referenced, please provide their SI equivalents.

SI PREFIXES APPLICABLE TO ENGINEERING

Factor	Prefix	Symbol[a]
10^{9}	Giga	G
10^{6}	Mega	M
10^{3}	Kilo	K
10^{2}	Hecto	H
10^{1}	Deka	Da
10^{-1}	Deci	D
10^{-2}	Centi	C
10^{-3}	Milli	M
10^{-6}	Micro	□
10^{-9}	Nano	N

[a] Unit symbols only used when preceded by a numeral.

For papers with a single author, “the author” should be used to indicate actions or opinions. Papers with multiple authors should use “the authors” to refer to collective actions or opinions.

Authors should use first-person pronouns only if absolutely necessary to avoid awkward sentence construction.

Footnotes and endnotes

Footnotes and endnotes are not permitted in the text. Authors must incorporate any necessary information within the text of the manuscript.

ACKNOWLEDGMENTS

Acknowledgments are encouraged as a way to thank those who have contributed to the research or project but did not merit being listed as an author. The Acknowledgments should indicate what each person did to contribute to the project.

Authors can include an Acknowledgments section to recognize any advisory or financial help received. This section should appear after the Conclusions and before the references.

APPENDIXES

Appendixes can be used to record details and data that are of secondary importance or are needed to support assertions in the text. The main body of the text must contain references to all Appendixes. Any tables or figures in Appendixes should be numbered sequentially, following the numbering of these elements in the text. Appendixes must contain some text, and need to be more than just figures and/or tables. Appendixes containing forms or questionnaires should be submitted as Supplemental Data instead.

REFERENCES

EACE uses the author-date method for in-text references, whereby the source reads as the last names of the authors, then the year (e.g., Smith 2004 or Smith and Jones 2004). A References section must be included that lists all references alphabetically by last name of the first author. References must be published works only. Exceptions to this rule are theses, dissertations, and

“in press” articles, all of which are allowed in the References list. References cited in text that are not found in the reference list will be deleted but queried by the copyeditor. Likewise, all references included in the References section must be cited in the text.

Examples of reference formatting are below.

Books — If a whole book is used (or pages here and there throughout the book), page numbers need not be given. If no author is listed, titles should be alphabetized. If a specific chapter is being used, the chapter title and inclusive page numbers should be included. Reports must include the full institution name and location.

> Evans, G. M., and Furlong, J. C. (2003). *Environmental biotechnology: Theory and applications*, Wiley, Chichester, U.K.
>
> *Moody’s municipal and government manual*. (1988). Moody’s Investors Service, New York.

Building Codes and Provisions — Building codes, provisions, and standards should be listed alphabetically by the name of the promulgating institution. If a title and code number are given, the title should be in quotes, and the code number in italics; if only a title is given, the title should be in italics.

> ACI (American Concrete Institute). (1989). “Building code requirement for reinforced concrete.”
> *ACI 318-89,* Farmington Hills, MI.
>
> Building Officials and Code Administrators International (BOCA). (1993). *The BOCA national building code,* Country Club Hills, IL.
>
> CEN (European Committee for Standardization). (1992). “Design of steel structures, part 1.1.”
> *Eurocode 3*, Brussels.

Electronic Materials —

CD-ROM—The section, chapter, and page numbers should be provided if available:

> Liggett, J. A., and Caughey, D. A. (1998). “Fluid statistics.” *Fluid mechanics* (CD-ROM), EACE, Reston, VA, Section …, Chapter …, pp. …

Website—The following elements should be included: author’s name (if known); year of publication or last revision (if available); full title of the document, in quotation marks; title of the complete work (if applicable), in italics; full web address, enclosed within angle brackets; and date of the visit (if pplicable), in parentheses. If the Web page shows no year of publication, the year of the visit may be used in its place.

> Arizona Dept. of Commerce. (2005). “Community profile: Hualapai Indian Reservation.” 〈http://www.azcommerce/com/doclib/commune/hualapai.pdf〉 (Mar. 17, 2014).
>
> “Acquisition reform network.” (1998). *Arnet*, 〈http://www.arnet.gov〉 (Jan. 21, 2010).

Journal Articles —
Use the following style for citation to an a journal:

> Authors. (Year of initial publication). “Title of paper.” *Journal abbr.,* DOI, CID/page range.
>
> Irish, J. L., and Resio, D. T. (2013). “Method for estimating future hurricane flood probabilities and associated uncertainty.” *J. Waterway, Port, Coastal, Ocean Eng.*, 10.1061/(EACE)WW.1943-
> 5460.0000157, 04013015.

In-Press Articles — Articles that are “in press” (i.e., those that have been accepted but have not yet been published) may be included in the References list. Include the year of acceptance, if possible, or the current year as follows:

> Dasgupta, G. (2008). “Stiffness matrix from isoparametric closed form shape functions using exact integration.” *J. Aerosp. Eng.,* in press.***Maps —*** The following style is used for maps:
>
> Brown, R. J. E. (1967). Permafrost in Canada, *Map 1246A,* Geol. Surv. of Can., Ottawa,
>
> ON. Smith, R. L., Bailey, R. A., and Ross, C. A. (1970). Geologic map of the Jemez
>
> Mountains, New
> Mexico, *U.S. Geol. Surv. Misc. Invest. Map, I-571.*

Newspaper Articles — The article author (if known), year in parentheses, title of the article in quotes, name of the newspaper in italics, and section/page numbers (if applicable) should be included for article citations:

> Mossberg, W. S. (1993). “Word isn’t perfect but new WordPerfect is too much for words.” *Wall*
> *Street Journal*., Dec. 2, B1.

Proceedings — The location of a conference or symposium is required only if it is part of the title or proceedings. The name and location of the publisher is required. If there is no “publisher,” the name of the location of the sponsor are required. The name of the sponsor is sometimes part of the title of a conference proceeding. Editor name(s) and volume number should be included if available.

> Eshenaur, S. R., Kulicki, J. M., and Mertz, D. R. (1991). “Retrofitting distortion-induced fatigue cracking of noncomposite steel girder-floorbeam-stringer bridges.” *Proc., 8th Annual Int. Bridge Conf.*, Engineers’ Society of Western Pennsylvania, Pittsburgh, 380–388.
>
> Karam, G. N. (1991). “Effect of fiber volume on the strength properties of short fiber reinforced cements with application to bending strength of WFRC.” *Proc., 6th Technical. Conf. of the American Society for Composites,* A. Smith, ed., Vol. 1, Technomics, Lancaster, PA, 548–557.

***Unpublished Material* —EACE** does not permit unpublished material to be included in the References list. It may be cited in the text in the following forms:

…other researchers (Orton et al., unpublished data, 1992)…

In some cases (A. W. Pinter, personal communication, 1979)…

Working papers and submitted papers are considered unpublished and should be cited in the text as follows:

(B. Smith, "[title of paper]," working paper, Salk Institute, Pittsburgh, Pennsylvania)

(B. Smith, "[title of paper]," submitted, Salk Institute, Pittsburgh, Pennsylvania)

Unpublished reports should be cited in text according to one of the following formats: (author

name(s), name of report, presented at ___, 2012)

(author name(s), name of report, unpublished report) A paper that has been presented at a conference or meeting but is otherwise unpublished should be

cited as an "unpublished report":

… in Chang and McTavish (unpublished report, 1991)…

TABLES

Tables should be either grouped at the end of the manuscript after the References section or uploaded as separate files. Tables should be numbered in sequential order (i.e., Table 1, Table 2, etc). Every table must be called out in the text in sequential order. For example, Table 3 should not be called out before Table 1—this will require the copyeditor to renumber the tables and move them. All callouts must match the tables provided.

Table Format

- Title: Table titles begin with the boldface "Table," followed by a boldface Arabic number and a period. Example: **Table 1.** Ultimate Rotations at the Joint Interfaces and Beam Ends
- All tables should be typed with clear columns.
- Vertical rules should not be used in tables. Horizontal rules are used to offset column headings at the top of the table and footnotes (if any) at the bottom of the table and to separate major sections.
- All columns must have a heading. Each table should have only one set of column headings at the top of the table. Using additional column headings within the body of the table should be avoided.
- Footnotes: A general footnote should be used to convey any information that pertains to the table as a whole and should precede any lettered footnotes. The general footnote should start with "Note:". Example: Note: Δy = notional yield displacement; Δu = axial shortening at peak load; Δf = axial shortening at the failure load; λ = deformability factor; η = displacement ductility factor.
- Lettered footnotes should follow the general footnote (if there is one). Lowercase superscript letters should be used, and all lettered footnotes must be cited within the table (footnotes are not permitted on the table title):

    - [a]Length of compression zone.
    - [b]Flexural shear strength of the masonry panel.
    - [c]Based on Smith et al. (2009).
- Photographs, sketches, line art, or other graphic elements are not permitted in tables. Any table that includes graphics must be treated and numbered as a figure.
- Highlighting and shading are also not permitted and will not be reproduced in print. Boldface font should be used for emphasis sparingly.
- Equations are allowed in the table body, but should be avoided if possible. Numbered equations are never allowed in tables.
- Tables should not be submitted in multiple parts (Table 1a, 1b, etc.). Tables with multiple parts should either be combined into one table or split into separate tables.

SAMPLE TABLE 1

Table 1. Holocene Sites Used to Develop VS-Based CRR Chart

Site	Test	Critical layer depth	*VP*
Japan			
Hanshin Expressway 5[a]	SL	2.1–5.3	900
Kobe-Nishinomlya Expressway	SL	4.4–10.5	1,540
Owi Island	DH	4.5–7.8	1,300
United States			
Coyote Creek[a]	CH	3.5–6.0	332
Marina District School[a]	CH	2.7–4.3	1,360
Bay Bridge Toll Plaza[a]	CH	5.0–7.5	1,540

Note: CH = crosshole; DH = downhole; SH = suspension logger.
[a]Sites of historic liquefication occurrence.

SAMPLE TABLE 2

Table 2. True Stress-Strain Data for FEA

	1.5-mm G450 sheet steel			3.0-mm G450 sheet steel		
Point	True strain (10^{-3})	Plastic strain (10^{-3})	True stress (MPa)	True strain (10^{-3})	Plastic strain (10^{-3})	True stress (MPa)
1	0	0	0	0	0	0
2	3.02	0.00	590	2.64	0.00	535
3	19.8	16.8	600	41.9	39.3	595
4	41.9	38.9	640	144	141	660
5	144	141	710	1,000	997	660
6	1,000	997	710	—	—	—

Figure Captions

Brief figure captions (which serve as identifying labels) must be double-spaced and placed at the end of the manuscript (before the tables) or uploaded as a separate file. Figure captions should be short and to the point; they need not include a complete explanation of the figure. Each caption should begin with the abbreviation “Fig.” followed by an Arabic number, followed by a period:

- **Fig. 1.** Plan view
- **Fig. 2.** Percentage breakdown of practitioner responses: Year 1 and Year 2

Figure Files

Figures should be uploaded as separate files in TIFF, EPS, or PDF format. If using PDF format, authors must ensure that ***all*** fonts are embedded before uploading to the Editorial Manager website. Every figure must have a figure number and be cited sequentially in the text.

Material from a Website — Material from a website is considered to be published on the website, even if it has not been published elsewhere. The fact that material was taken from a website means neither that it is in the public domain nor that authors can use it without permission. Many websites include copyright notices. Unless the website explicitly indicates that

material on the site is in the public domain, authors of journal articles must obtain permission to use any figures, photographs, tables, or maps that they obtained from a website.

SUBMITTING THE FINAL VERSION OF THE MANUSCRIPT

Microsoft Word is EACE's preferred file format for manuscript text and tables All text, including the abstract and References list, should be prepared in single-column and double- spaced format. Indent or add extra space between all paragraphs. Use a clear, readable font, such as Times New Roman, in 10, 11, or 12-point type. Do not submit any manuscript text smaller than 10 points. Section headings should be numbered sequentially left aligned and have the first letter capitalized, starting with the introduction.

Place tables and double-spaced figure legends on separate pages at the end of the manuscript. Verify that the final version is complete and that all pages are numbered correctly, including figures and tables. Do not include blank pages to separate sections.
